Professional Summary:

- Having 3.5 years of working experience in areas development of Web -Based Enterprise application in JSE and J2EE Technology with Spring, Microservice, Spring Boot, Hibernate, JPA framework as well as distributed technology with REST API, AWS, DevTools Jenkins.
- Having good working experience on Core Java (**OOPS, Collection, Exception Handling, Serialization**) also having experience on **java 8**.
- Having working knowledge in developing applications using JAVA/J2EE technologies like Java, **Spring Boot, Microservice, Spring CORE, Spring MVC, Spring ORM , Spring REST**, Microservice, ,AWS, DevTools Jenkins
- Experience in developing **Restful Web Service** (exposing the business operations as web services using JAX-RS API implementations Jersey).
- Having basic knowledge on **Design Pattern** (Singleton, Factory, and DAO).
- Having knowledge on XML and XML Related Technologies like XML, XSD, Schema Validations.
- Having working experience on tools like **GIT, MAVEN** and **POSTMAN**.
- Having experience with **Tomcat**.

Experience Profile :

currently working as Java Developer in BROMINE TECHNOLOGY Site no 126, Arun Complex, Whitefield, Bengaluru Karnataka having 3.5 years of experience to till now.

Academic Profile:

- Bachelor of Engineering from ITM Gwalior.

Project Profile :

Current Project:

Title : MetaCore Suppliers and Storage Jen-Tin **Warehouse**

Client Organization: Adelaide Warehouse & Distribution Service , Australia.

Environment: JDK 1.8, Spring Boot 2.x, Spring 4.x (Web, JMS), Maven, JUnit, SQL, Eclipse, AWS, DevTools Jenkins
Team Size: 12
Duration: 2023 - /-
Role: Developer

Description :

My Project is Supply Chain Management Domain. This, is for stock Management Between different customers and vendors using warehouse application, That supports orders, Invoices, Tax Calculations Reporting. Warehouse application is products Management Software that is used by warehouse users that fulfill daily needs of End Customers using different Channels for Stock Exchange. This Software is for Distribution Management of Stock Between Manufacturing Company and Retails using Stock Storage concept. Involved Between multiple channels and Controlled by warehouse Admin. It Provides Stock Management service for Different Users.

Responsibilities:

- Used Spring framework for Dependency Injection
- Also, involve to develop Service Layer.
- Used MVN for repository
- Resolving the production issues reported by the client users.

Last Project :

- Name : INVENTORY MANAGEMENT SYSTEM(IMS)
- Role : Developer
- Client: Oriental Insurance
- Technology : Spring, JSP, Servlet, Core Java, Web Services with Hibernate
- Team Size: 10
- Duration :Nov/2022-2023

Description-

As the role of **Software Developer** is to keep a detailed record of each in or out product as it enters or leaves a warehouse so, Involved in keeping all the data of each items using spring and JSP, Hibernate and also involved in bug fixing. We check all the medicine and do it in database entry, and then it is distributed in every state. A separate login model is made for each state so that any medicine that he goes to can be seen by him and the person who is sending it can also see it. We get the medicine stored in the warehouse checked and match the date and manufacturing date of the system., then it shows that which medicine has expired, which has expired, we send it back to the same place where the manufacturing has taken place. In my project my role was to view the data of all the tables at once, I had a lot of records to see together, so I joined all the tables. I kept all the records in a temporary table and at night cron scheduler would drive the scheduler and show the records to the manager in the morning time of the day. I used md5 algorithm for encryption for login module password encryption

When needed, we used to run cron scheduler every 12 hours even during the day.

Responsibilities:

- Stories given by BA.
- Code Modules based on Acceptance Criteria.
- Coded Entities, Service and Controller
- Resolving the issues reported by the client users.

Technical Skills :

Java Technologies	Java , JDBC , Servlet , JSP
Distributed Technologies	Restful Services
Frameworks	Spring , Spring Boot, Hibernate and JPA
Databases	MySql , PostgreSQL
Web/App Servers	Apache Tomcat 9.0
IDE	Eclipse , STS,IntelliJ
Operating System	Windows
XML Technologies	XML
UI Technologies	HTML, CSS, JavaScript, JQuery, Ajax
Cloud Technology	AWS ,S3
Dev Tools	Jenkins CI/CD pipeline
Tools	MAVEN, Gradle, Git, Postman

Declaration:

I hereby declare that the above mentioned information is true to the best of my knowledge.
